

SOMETHING ISN'T RIGHT

The solvers can tell when one thing is out of place.

Your goal is to determine the "odd one out" in each set of five. For example, in the set

AWAY, HERRING, MAMMOTH, TAXI, WITHOUT

the answer is HERRING, because it is the only one whose letters are not all vertically symmetrical.

Each group should be unambiguous when you find the connection, but you may need to look several different properties of each word, including (but not limited to) the arrangement of individual letters or groups of letters, adding or subtracting letters, finding hidden words or phrases, considering the meanings of each word, or doing other creative things that will yield a clear and unambiguous connection.

The odd ones out will themselves be alphabetized in each column.
