

## ZOMBIE FACT #3

# HUNTING

Melee, ranged and firearm weapons are all useful in a zombie apocalypse but all should be properly maintained and free of foreign contaminants.

In the diagram below, each gravestone will have a zombie emerge in an orthogonal adjacent space. Zombies cannot touch other zombies, even diagonally. The numbers outside the grid show how many zombies in that row or column.

Locate 4 hunters on unoccupied spaces so every zombie is targetted by at least one hunter along a row, column or diagonal. Hunters can target multiple zombies along the same direction, but are blocked by gravestones.

Example (one hunter)
